2G network talk time	8 hours
3G network talk time	4 hours
Wi-Fi network Internet time	4.5 hours
3G network Internet time	4 hours
Audio time	17 hours
Video time	4 hours

## How to Use

Slide off the top piece of the ChargeBlock case. Slide the iPhone into the base. Replace the top piece and click it into place.

## Charging the Battery Case

The case can be charged with or without an iPhone attached.

To charge: plug the micro-USB end of the charging cable into the case and connect the USB end to a computer or USB adapter. One of the three LED lights on the back of the case will begin to flash, indicating that charging is taking place. The case takes approximately 4 hours to charge.

When charging both the case and iPhone, the iPhone will always be charged first. Once the iPhone is charged, the case will begin charging. To bypass charging the iPhone, slide the On/Off switch to "Off" and power will be routed directly to the ChargeBlock case.

The On/Off switch allows the user to control the iPhone charging and sync. Slide the switch to the "On" position to charge or sync the iPhone. To prevent charging or sync, slide to "Off."

**Note:** To maximize battery life, please set the On/Off switch to "Off" until charging is desired. The ChargeBlock case may become warm to the touch during use. This is normal.

## Charging Status

The three LED lights, located on the back of the case indicate the following: if the battery is near empty, the right LED will begin flashing. Once the battery capacity has reached 30%, the right LED will remain solid and the middle LED will begin to flash. When the battery capacity has reached 70%, the right and middle LEDs

will remain solid and the left LED will flash. Charging is complete when all three LEDs remain solid.

**Note:** Please charge the ChargeBlock case completely before first use.

## Dis-charging Status

To check the battery level in the ChargeBlock case, press the LED button. One, two or three of the LED lights will light up, depending on the amount of remaining power.

- Three LED lights: 100-70% remaining power
- Two LED lights: 70-30% remaining power
- One LED light: 30% or less remaining power
- Battery capacity 0% --- all LEDs are off.

## Camera LED

The ChargeBlock case includes a built-in camera LED light to assist with photos or videos taken at night or in poorly lit conditions.

To turn the camera light on or off: Press and hold the LED button for 3 seconds.

## Syncing with iTunes

If the iPhone and ChargeBlock case are connected to a computer through the charging cable, the iPhone can sync with iTunes. To prevent syncing, turn the ChargeBlock case switch to "Off."

## Maintenance

- Fully charge the ChargeBlock case at least once every three months to maintain battery life.
- Wipe clean with a soft, dry cloth.

## Safety Information

Do not:

- Place the ChargeBlock case for iPhone in direct sunlight.
- Expose to high temperatures or liquids of any kind.
- Burn, crush, puncture, or disassemble the case.
- Keep the ChargeBlock out of children's reach.
- If liquid from the ChargeBlock case for iPhone spills out, do not let it contact skin, clothing, or eyes. Flush affected areas immediately with clean water. In case of contact with eyes, hold open and flush with liberal amounts of water. If irritation develops or persists, contact the poison control center or a physician.

## Disposal

Dispose of the ChargeBlock case for iPhone properly. The ChargeBlock case for iPhone contains lithium-ion battery cells and should NOT be discarded with ordinary household waste. Contact your local recycling center for proper disposal.

"Made for iPhone," means that an electronic accessory has been designed to connect specifically to iPhone and has been certified by the developer to meet Apple performance standards.
